## The European Bank of Reconstruction and Development selects Egress Switch Secure Email and File Transfer to protect and control sensitive data when communicated across its network of third parties

A leading provider of encryption services, Egress Software Technologies today announces the use of Egress Switch Secure Email and File Transfer by the European Bank of Reconstruction and Development (EBRD). Using the solution, EBRD employees, clients and business partners are able to exchange sensitive emails and attachments in a secure manner.

Supporting projects in over 30 countries, EBRD is an international financial institution that promotes entrepreneurship and provides project financing for banks, industries and businesses whose needs cannot be met by the market. This work relies heavily on staff, clients and partners being able to communicate with one another quickly and effectively – frequently involving sharing personally and commercially sensitive information electronically via email.

As both the frequency and associated costs of data breaches continue to increase, organisations across all industries are recognising the importance of information security measures that not only protect from external attack but also secure staff communications. By taking proactive steps to provide staff with email and file encryption, EBRD is able to not only helping to protect sensitive data, but also reducing the risk of financial and operational loss caused by a data breach.

EBRD selected Switch Secure Email and File Transfer to provide end-to-end protection for sensitive information. As well as data encryption, the solution offers comprehensive control over shared data – including the ability to restrict actions such as downloading or printing of emails and attachments, and the ability to revoke a recipient's access altogether, should sensitive information be accidentally or deliberately sent to an unauthorised recipient. The software is also free for the bank's recipients to use, meaning that sensitive information can remain protected throughout the data sharing lifecycle.
