

Egress Switch Secure Managed File Transfer

Secure automation for file and folder transfer, regardless of size or type, helping organisations secure data, reduce overheads and digitise records.

Sharing large volumes of structured and unstructured data, often highly sensitive in nature, provides a challenge to organisations looking to move data to a different location or securely upload scanned documents when going paperless. Egress Switch Secure Managed File Transfer automates the encrypted transfer of data, and features detailed auditing and reporting to support management of the data sharing process.

Benefits

- ✓ Reduce costs and uphold data security when digitising paper archives
- ✓ Keep data safe using encryption during transfer across networks
- ✓ Reduce administrative overheads and enhance efficiency
- ✓ Streamline processes through integration with existing workflows
- ✓ Coordinate data across separate locations
- ✓ Move business operations to a new location efficiently and securely
- ✓ Monitor organisational data transfers to gain full visibility and control
- ✓ Uphold compliance requirements when transferring sensitive data

Secure and streamlined automated file transfer

Data transferred using Switch Managed File Transfer is encrypted at rest and in transit, and can be transferred to network drives or cloud storage. Key management provides fully auditable end-to-end encryption in line with compliance requirements, while audit logs provide a detailed picture of how the data is being sent.

Choice over integration, deployment and hosting

Switch Managed File Transfer is designed for easy integration into existing systems, workflows and processes. Support for on-premise, hybrid and cloud hosted implementations provides infinite scalability combined with the flexibility of sharing on-premise content. In addition to choice over hosting, authentication and integration, Switch Managed File Transfer features APIs that enable organisations to customise how they securely share their data, while continuing to benefit from the underlying Switch encryption technology.

Flexible data transfer scheduling and auditing

The ability to automate the secure file transfer process helps IT administrators schedule bulk transfers outside of working hours to reduce network load, while the notification system provides reports once the process is complete. New file transfers can be set up on an ad-hoc basis, with automated syncing of initial and destination folders ensuring that the files are up to date. The notifications and real time alerts can be customised both sender-side and for recipients.

Complementary products

- Egress Switch Secure Email and File Transfer
- Egress Switch Secure Workspace

“An encrypted paperless system is cheaper, greener, even more secure and uses less space. This saves us over £100,000 per year on storage costs alone.”

CROYDON COUNCIL

Highlighted features

- ✓ Automation for transferring large amounts of data securely
- ✓ Secures data at rest and in transit using AES-256 bit encryption
- ✓ Full auditing and reporting to maintain streamlined data transfer
- ✓ Authentication options for controlled access
- ✓ Flexible hosting options, including on-premise, hosted and hybrid
- ✓ Schedule bulk transfer outside working hours
- ✓ Secure data transfer between network shares or cloud storage, including S3
- ✓ Provides APIs for customisable secure data transfer
- ✓ Notifications and email alerts enable administrators to keep track of transfers
