

Egress Switch Secure Vault

Secure **email archiving, reporting and analytics** designed to help meet regulatory requirements, maintain business continuity and prevent data breaches.

With increasing pressure placed on organisations to maintain compliance with existing and upcoming data protection and retention legislation, as well as preserve business continuity, organisations need a secure way of effectively storing and accessing all email content. Egress Switch Secure Vault offers the ability to index, archive and instantly search plaintext and encrypted email content. Organisations can then understand and analyse their data, quickly perform internal investigations such as Subject Access Requests (SARs), and meet compliance requirements including the EU GDPR.

Benefits

- ✓ Gain a deeper understanding of organisational email data
- ✓ Meet legislative and industry compliance requirements, including the EU GDPR
- ✓ Respond to Freedom of Information requests and Subject Access Requests quickly and easily
- ✓ Maintain business continuity with complete email archive, download and reply functionality
- ✓ Monitor usage of email security solutions and improve uptake
- ✓ Secure personally identifiable and commercially sensitive data but provide easy access for authorised users
- ✓ Apply additional layers of protection using multi-factor authentication
- ✓ Adopt an email encryption solution without compromising archiving functionality

Secure email archive and instant e-discovery

All data in Switch Secure Vault is encrypted at rest. In addition, it is further protected using multi-factor authentication and stringent role-based access management for users needing to perform investigations into organisational email data. All investigations require approval by other users who have the necessary access permissions, and this approval can be revoked at any point. In addition, full auditing and reporting enables administrators to monitor the subjects of user searches and subsequent actions with the resulting search content. Reporting via e-discovery also provides in-depth analysis of how employees are securing sensitive data, allowing targeted improvements to be made to organisational data security processes.

Flexible infrastructure for bespoke archiving and data protection

The complexity of an organisation's infrastructure can often be a barrier to effective archiving and security solutions, which is why Switch Secure Vault is platform and provider agnostic with full cloud, on-premise and hybrid implementations available, including UK-only data centres for hosting. Implementation is completely flexible, with the option to automatically store highly sensitive email content on-premise while benefitting from cloud storage for non-sensitive data. Switch Secure Vault also integrates into Microsoft Outlook, helping users access their personal archives directly from their desktop. Automated system triggers and report generation further aides customisation and integration.

"We decided to use Switch Secure Vault to help monitor and manage our compliance with both data protection law and industry best practice."

GENERAL MANAGER,
HEALTHCARE RM

Integrated access to personal archives with fast, comprehensive search

Switch Secure Vault enhances staff productivity by enabling users to access encrypted and plaintext email from a single location through a simple user interface, accessible via the web browser or from within Outlook. This lets users explore their personal archives and enables administrators to monitor the entire email archive, using search parameters and options to search inside attachments, as well as the email body and subject lines. Data visualisations provide clear overviews of how users and organisations are sharing and protecting sensitive data, with the powerful analytics engine providing real-time, detailed information for drilled-down monitoring and investigating.

Complementary products

- Egress Switch Secure Email and File Transfer
- Egress Switch Email and Document Classifier

Highlighted features

- ✓ Index and store encrypted and plaintext email content
- ✓ All content encrypted at rest and in transit using AES-256 bit encryption
- ✓ Rapid search and access of archived emails and attachments
- ✓ Can be deployed on-premise, fully hosted or in a hybrid system
- ✓ Choice of hosting, including MS Azure and AWS, with the ability to choose data residency location
- ✓ Full auditing and reporting of all system and user interactions
- ✓ Fast import of historic email data and existing PST files
- ✓ Email discovery for exportable data analytics
- ✓ Personal archiving for individual users, with Outlook integration
- ✓ Restrictions on data search for administrators, including mandatory authorisation
- ✓ Supports single sign-on via MS Active Directory using ADFS or other providers, such as SAML v2
- ✓ Multi-factor authentication available via SMS and QR code
