

Egress Switch Secure Web Form

Protecting the flow of sensitive data into an organisation by helping third parties securely and efficiently **share large files and personal information.**

Third parties regularly need a single point of contact to share sensitive information, including large files, with organisations. Proof of identity, evidence and official documents all need to be shared securely, and organisations need to audit and control this data intake. Egress Switch Secure Web Form fulfils this need by providing bespoke web-based forms that allow third parties to easily fill out their details, upload files and send them to the organisation in an encrypted format.

The screenshot shows a web browser window displaying the Egress Secure Web Form. The page has a dark blue header with the Egress logo. Below the header, there's a section titled 'Egress Secure Form' with a note: 'Please complete all fields marked *'. A small disclaimer states: 'This form is intended for queries that do not require an immediate response. If you require urgent assistance then please call us on 0844 8000 172. Please confirm whether your enquiry requires urgent attention: No, I do not require urgent assistance / Yes, I do require urgent assistance (please call us on 0844 8000 172)'. The main form area is titled 'About your enquiry' and contains fields for 'Name *' and 'Email *', a text area for 'Please provide any additional information you'd like to submit with your files', and a 'File Upload' button with a plus icon.

Benefits

- ✓ Enhance efficiency and cost saving by reducing the time taken to share data
- ✓ Make it easy for third parties to submit sensitive data securely
- ✓ Upload to existing workflows to reduce administrative overheads
- ✓ Prevent data loss and protect sensitive content
- ✓ AV scanning ensures no malicious files will reach your network
- ✓ Meet legislative and industry compliance requirements, including the EU GDPR
- ✓ Free for third parties to transfer sensitive data, with no account sign up required
- ✓ Provide a branded, customisable area on a corporate website for trustworthy and secure data transfers
- ✓ Integrate data security strategy into existing processes for joined-up management and control

Secure information sharing made simple

Content and form details uploaded via Switch Secure Web Form are encrypted in transit and at rest, irrespective of the storage destination. File types can be restricted and additional user verification put in place in order to further protect and control the data being received. Attachments are also scanned for viruses when submitted, to protect the corporate network. Complete auditing and reporting, with notification options, means administrators can closely monitor the user activity and uploads taking place.

Customisable forms with flexible hosting options

The secure forms are fully customisable, with the ability to brand according to corporate guidelines and also choose which data fields are included. It's also possible to restrict the data types that can be uploaded. Organisations can choose where to host both the web forms and the files that are shared securely by third parties, with one option being integration with Egress Switch Secure Workspace for easy online file storage and management.

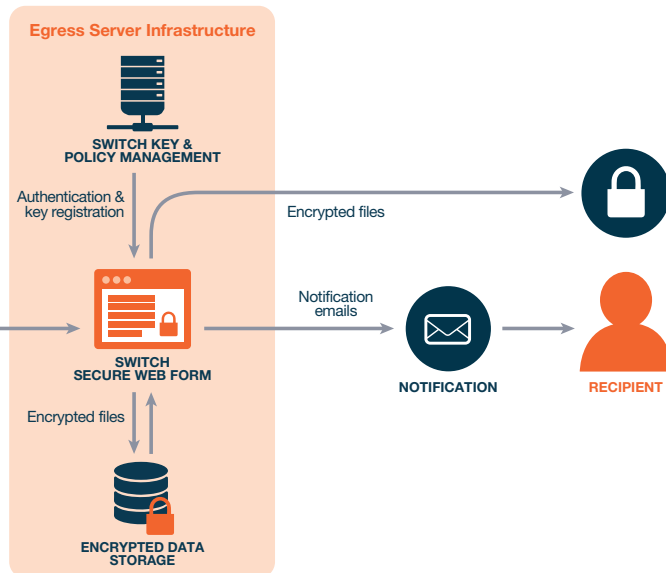

“All submissions can be tracked and audited, and confirmation receipts can be generated so that the user supplying the information can be confident that it has been received.”

Easy transfer of sensitive data into organisations

Switch Secure Web Form is user-friendly and free for third parties to use, reducing the time taken to share sensitive files. The secure forms are also accessible via mobile for remote access and upload, and no sign up is required. Administrators benefit from tools to easily organise the files they receive in their secure storage location, while automation provides further efficiency and cost savings for the file upload and management process.
